About This Content

The modern, dual-voltage Class 319 EMU is here for Train Simulator in the familiar First Capital Connect livery as seen on Thameslink services out of London.

Typical of EMUs built in the 1980s, the Class 319 was built by BREL York between 1987 and 1990 for north-south cross-London services from Bedford to Brighton, entering revenue-generating service in 1988. The four-car units were able to run on both overhead electrification – on lines north of Farringdon - and third rail pick-up, for lines south of Farringdon.

Two sub-classes were originally built and over the years, the 86 trainsets have been refurbished, creating five sub-classes in total, of which four still exist. Following privatisation of British Rail, the fleet was divided between two operators, Thameslink and Connex South Central; in 2006, First Capital Connect took over the Thameslink franchise and now operates Class 319 units on Bedford to Brighton services.

The Class 319 EMU for Train Simulator is available in First Capital Connect livery and includes a full four-car unit, comprising DTSO, MSO and TSO vehicles. Features of the model include passenger view, fully detailed cab interior, cab lighting, working cab fan, opening cab windows, two-tone horn, cab window blind, day/night running light selection, window reflections in passenger compartments, and driver vigilance device (which can be enabled and disabled).

The locomotive is also Quick Drive compatible, giving you the freedom to drive the First Capital Connect Class 319 on any Quick Drive enabled route for Train Simulator, such as those available through Steam. Also included are scenarios specifically for the [London-Brighton](#) route (available separately and required to play these scenarios).

Scenarios

Four scenarios for the London-Brighton route:

- Training: Class 319 Simple Controls
- Training: Class 319 Expert Controls
- City Flyer
- Coast Flyer

More scenarios are available on Steam Workshop online and in-game. Train Simulator's Steam Workshop scenarios are free and easy to download, adding many more hours of exciting gameplay. With scenarios being added daily, why don't you check it out now!

Key Features

- Class 319 EMU in First Capital Connect livery
- DTSS, MSO and TSO vehicles
- Passenger view
- Fully detailed cab interior
- Cab lighting
- Working cab fan
- Two-tone horn
- Opening cab windows
- Cab window blind
- Day/night running light selection
- Window reflections in passenger compartments
- Driver Vigilance Device
- Quick Drive compatible
- Scenarios for the London-Brighton route
- Download size: 116mb

Title: Train Simulator: First Capital Connect Class 319 EMU Add-On

Genre: Simulation

Developer:

Dovetail Games

Publisher:

Dovetail Games - Trains

Franchise:

Train Simulator

Release Date: 14 Mar, 2014

a09c17d780

Minimum:

OS:Windows® Vista / 7 / 8

Processor:Processor: 2.8 GHz Core 2 Duo (3.2 GHz Core 2 Duo recommended), AMD Athlon MP (multiprocessor variant or comparable processors)

Memory:2 GB RAM

Graphics:512 MB with Pixel Shader 3.0 (AGP PCIe only)

DirectX®:9.0c

Hard Drive:6 GB HD space

Sound:Direct X 9.0c compatible

Other Requirements:Broadband Internet connection

Additional:Quicktime Player is required for playing the videos

English

Every thing about this train is meh, sound meh, model meh, dsd is annoying as you cant turn it off!. Since the recent hotfix, this DLC has been dumbed down and really unbearable to do anything with now. Good as AI, but nothing else.

1V10. Although I am more of a diesel man to be honest. This one is my favourite EMU. I really do like the Class 319 units and this pack I picked up in a bundle deal, so I bagged a bargain here. Depending on your needs or what routes you own. If you are on a budget then either wait for the Steam sales or go for the "Europe Commuter Collection" bundle as you get the London to Brighton to run this unit on as well as other bundled up DLC as well. The sounds are so-so but the unit is great fun to drive and would be perfect with the Armstrong Powerhouse sound set. I personally enjoy this unit and it is very quick off the mark as well. The brakes are just right as well as they are not spongy or too hard like I have experienced with some other units that I have driven in the game.

Overall Rating: 10V10.. As much as I recommend buying this, buying the Armstrong Powerhouse sound pack is a must in my opinion, especially to rid this of its awful default sounds. Also note that the TSO is back to front on the quick drive consists.. Well, here we go again...

PROS:

It's a nice model generally. It looks about right.

Passenger view is alright I guesss.

CONS:

Sounds (I'll talk more about them further down the review)

Physics

Only one livery.

The sounds on this train are rubbish. They're reused off of a previously released train (455 I believe). They really need updating. A 319 sounds nothing like a 455 in real life, so why should it be like that in Train Simulator? Remember, it's a SIMULATOR, and they're charging us nearly \u00a312 for it. Rip-offs.

The physics are pretty bad too. 0 - 30 at notch 4 takes about 10 seconds.

And you could've included more liveries? Here's a list of liveries that DTG COULD OF included but DIDN'T:

London Midland

Northern

Southern

Thameslink#

Connex

Project Thameslink

Network South East (Yes, I know you can get it but we shouldn't have to pay \u00a32.99 V \u00a33 for it)

Thameslink black and yellow stripes.

Now I know we can get a lot of them for free on other websites, but they should just simply come with it. Now I do know about licensing issues, but could we just at least have one more livery?

Overall - 4V10

Would only buy on a sale with the mandatory Armstrong Powerhouse pack.. A really nicely modelled train, both inside and out. Also sounds and drives well once you get the AP pack, which is essential for this.. I absolutely love this unit!. just buy the uk pack... Train itself is okay without the AP pack, but getting it will definitely make a Class 319 a joy to drive
With the AP pack, it features sound genuinely recorded from a Class 319 instead of the default sound ripped from Class 455

Have been on these EMUs about a million times IRL and this is a very detailed replica, but just remember to get the sound pack from Armstrong Powerhouse. The train is just about average. I don't recommend that you buy it, however you pretty much need it if you're playing on the London to Brighton add-on. Also, let's discuss that you need to buy alternative repaints for this train, a bit silly. Also, as per usual you need to buy the AP sound pack. BUY.

The physics aren't alright. If you don't know anything about the Class 319 and have never travelled on one then you pretty much wouldn't notice anything. However, the AWS clear goes off when you approach a cautionary signal. Like come on now, how did that pass final checks. The sounds are recycled. Like how the hell can a person passionately make the train and think, WOW, I've really outdone myself. Unbelievably overpriced for what trash bag it was when it was released.. Ripped Off Sounds From Thompson 455 And No Running Sounds Whatsoever Once Again Dovetail At Their Best. I have ridden class 319's for years IRL, so I can say this add-on is modeled very well to the real thing the passenger view is spot on and looks like the inside of the real thing. The trains simulate the real life function very well like the AWS start up sequence and the DSD. The sounds are not very accurate though so I would recommend getting the AP Sound Pack that greatly improves the train

This is a must if you're simulating the commuter services in London you must get this DLC its worth every penny.. A welcome addition to the list of available assets suitable for London To Brighton route.

If you play or make scenarios for this route this DLC is essential ... however you need to "need" this product for it to be worth buying, If you are not interested in stocking routes prototypically its not worth your time and money for the following reasons:

- 1, As with most recent releases this DLC is crippled with only one skin (the now defunct FCC) so you will need to search for suitable skins from third parties and the community to make use of it in any other era, DTG promises of additional skins available via marketplace (namely NSE) were only honored months after they were announced and long after a number of high quality freeware skins were made available by the community which make the workshop reskins redundant.
- 2, The 319 has a number of overtly obvious bugs that will make you question if it was tested at all before release, the most obvious and game breaking is the AWS incorrectly functioning.
- 3, The 319 also has a number of corners cut: no key bindings for a number of cab functions including important ones like DRA, copy-n-pasted sounds mostly from the class 455 and the inability to switch power collection modes.

The good news is there is a fix however you need to factor the cost into the total cost of buying this product: the 319 sound pack from Armstrong Powerhouse, addresses the bugs and bridges all the cut corners such as the missing key bindings ...

I'm going to mark this DLC as not recommended in its current form, on its own its not fit for purpose ... however if you are interested in the London To Brighton route and you are prepared to do the legwork and invest in additional third party products to bring the 319 to an acceptable standard then its an essential addition to your stock For £34.79 on sale I decided to wing it and give the Class 319 a try. The train is decent to drive but once again the sounds are recycled from the Class 455. Get the AP pack alongside this!

If you have the London to Brighton route it includes 2 new scenarios but none for the Chatham Main Line or South London Network! Unfortunately the scenarios on the workshop require you have the London-Faversham, South London Line and Class 378 packs additionally so for some that will be a disappointment!

Overall, 6/10 for the standard DLC. 8.5/10 for the DLC + Armstrong Powerhouse pack.. NICE AND BRITISH. A varied loco, with wonderful textures but frankly space age physics.

Pros:
None

Cons:
- You can't change the destination of the train
- Sounds are a bit rubbish in my opinion
- Rather get the Armstrong Powerhouse class 319
- In the Midland Mainline you would get this train in the midland mainline!

. Recommended!. Class 319 Review:

Pros:

- +Decent cab view, most features simulated and reasonable textures
- +Lovely modes, the livery may already be defunct, but it is still well modelled and detailed
- +Passenger view is good, someone even left their book behind
- +Sounds are ok, not wonderful but easily fixed by the AP sound pack
- +Great for London to Brighton and the South London Network

Cons:

- Acceleration is too quick for a 319
- Only 2 scenarios, a bit of a shame for an otherwise fairly good train

Overall:

Excellent train, let down again by poor physics and few scenarios. Get the Armstrong Powerhouse sound pack for this! It fixes the physics, as well as giving it a dsd, opening windows, driver only operation and, of course, wonderful sounds. However, this is still worth it in a sale. Also, I bought it in the Commuter Europe Collection, which comes with London to Brighton, the class 421, DB BR423 and Munich to Augsburg, for only £329.99 (or less in a sale).
